

01. AUTONOMOUS MULTI-AGENT ARCHITECTURE

Hermes Agent Framework

AM / PC

Scope Lock & Intake

Tech Lead

TDR Architecture (≤400 LOC)

Domain Devs

Next.js · Go · Godot 4

QA & Verification

Playwright E2E · TDD

DevOps

CI/CD · Docker · VPS

Lean core of 2-3 Senior Specialists directs autonomous agent teams. Architecture contracts, boundary checks, and release gates eliminate communication overhead and defect escapes.

02. INDUSTRIAL P0 → P8 DELIVERY PIPELINE

Deterministic Quality Gates

P0-P2

Intake & Scope Lock
Requirements locked into immutable Original Scope Source & parent Epic.

P3-P4

Architecture & Design
TL defines TDR contracts (≤ 400 LOC); Designer produces tokenized specs.

P5

Test-First Build
Dev agents build test-first; all PRs pass automated ci-smoke gates.

P6

Dual Parallel Review
Simultaneous review: TL (architectural purity) + QA (test completeness).

P7-P8

Automated Deploy
Headless verification, staging promotion, and human manager release sign-off.

03. PROVEN REAL PROJECTS SHOWCASE

100% Automated Test Pass

ENTERPRISE WEB ECOSYSTEM

phuongtri.com

Phương Trí Platform

Multimedia publishing & consultation platform engineered via autonomous multi-agent pipelines.

Next.js (SSR/SSG)

Go REST Backend

PostgreSQL

Docker

■ Dynamic VietQR booking flow, audio/video player, custom CMS lead triage.

■ AES-256 database column encryption, 2FA (TOTP), RBAC, audit logging.

■ 100% frontend components, Go micro-services, and Playwright E2E suites.

2D HEXAGONAL GRID SYSTEM

Lego-Block v3.0

Modular Game System

High-complexity 2D hex-grid game engine stress-testing architectural discipline under AI execution.

Godot Engine 4.x

Strict GDScript

Native SQLite (GDExtension)

Cross-Platform

■ ECS-lite hybrid Node foundation with 10-phase pluggable Step Pipeline.

■ 7 domain event buses (GameBus), 4-tier real-time Fog of War algorithm (O(1)).

■ 46+ automated unit/integration suites (100% PASS) with boundary audits.

Capability Brief One-Pager · Page 1 of 2

04. VELOCITY & EFFICIENCY ADVANTAGE

vs Traditional Offshore Teams

24–48h
Module Cycle
5x faster (vs 1–2 wks)

6–8 wks
Full Platform
3x faster (vs 4–6 mos)

2–3
Core Leads
70% leaner team

60%–70%
Effort Saved
Human hours reduced

100%
Test Pass
Playwright E2E & unit

05. STRICT PRE-MERGE REVIEW GATES

Zero Defect Escape Policy

01

Scope Lock & Sizing

TDR contracts; strict PR limit ≤ 400 LOC

02

CI-Smoke Gate

Automated build, lint, type-check, and unit test pass

03

Dual Parallel Review

Independent simultaneous approvals from TL & QA

04

Architectural Boundary Audit

Headless audit enforces zero unauthorized dependency leaks

05

Manager Release Approval

Immutable SHA & visual scorecard signed off by Human Lead

06. ENGAGEMENT & PARTNERSHIP MODELS

Flexible Delivery & M&A

MODEL 01

Dedicated Pod

AI-Driven Dedicated Team (AI-ODC)
Autonomous agent execution overseen by senior human lead for high-velocity continuous feature shipping.

MODEL 02

Milestone-Based

Turnkey System Development
Fixed-scope delivery with rigid TDR contracts, milestone gates, and full code & infra ownership transfer.

MODEL 03

Co-Development

Technical Partnership / JV
Co-developing proprietary AI-native software products targeting Japanese and Southeast Asian markets.

MODEL 04

Strategic Capital

Strategic Investment & M&A
Capital partnership or acquisition for groups seeking to absorb proven multi-agent engineering toolchains.

Direct Engineering Engagement
Evaluate scope, inspect architectural blueprints, or initiate proof-of-concept pods.
